Nonlinear Crack Models for Nonmetallic Materials Alberto Carpinteri, 2012-12-06 In this volume a survey of the most relevant nonlinear crack models is provided with the purpose of analyzing the nonlinear mechanical effects occurring at the tip of macrocracks in quasi brittle materials such as concrete rocks ceramics polymers high strength metallic alloys and in brittle matrix fibre reinforced composites Such local effects as for example plastic deformation yielding strain hardening strain softening mechanical damage matrix microcracking aggregate debonding fibre bridging fibre slippage crazing and so on are properly described through different simplified models representing the peculiarities of the phenomena involved The models are introduced and described separately and then compared in the last part of the book This volume will be of interest to students professionals and researchers in the field of nonlinear fracture mechanics **Flow-induced Vibration**
