Finite Element Methods-(For Structural Engineers) Wail N. Al-Rifaie, Ashok K. Govil, 2008 About the Book The book presents the basic ideas of the finite element method so that it can be used as a textbook in the curriculum for undergraduate and graduate engineering courses In the presentation of fundamentals and derivations care had been taken not to use an advanced mathematical approach rather the use of matrix algebra and calculus is made Further no effort is being made to include the intricacies of the computer programming aspect rather the material is presented in a manner so that the readers can understand the basic principles using hand calculations However a list of computer codes is given Several illustrative examples are presented in a detailed

stepwise manner to explain the various steps in the application of the method A fairly comprehensive references list at the end of each chapter is given for additional information and further study About the Author Wail N Al Rifaie is Professor of Civil Engineering at the University of Technology Baghdad Iraq He obtained his Ph D from the University College Cardiff U K in 1975 Dr Wail established the Civil Engineering Department at the Engineering College in Baghdad and was the Head for nearly seven years He received the Telford Premium Prize from the Institution of Civil Engineering London in 1976 His main areas of research are Box girder bridge folded plate structures frames and shear walls including dynamic analysis He is the author of three books on structural analysis in Arabic Ashok K Govil is Professor in the Department of Applied Mechanics Motilal Nehru Regional Engineering College Allahabad India and was also Head of the same department for over five years He obtained B E degree in Civil Engineering 1963 from BITS Pilani India and M S 1969 and Ph D 1977 from the University of Iowa Iowa City U S A Dr Govil s main areas of research are Optimal design of structures fail safe design of structures and finite element method He has written several research papers and technical reports and developed many computer programmes for optimal design of structures including dynamic analysis and vulnerability reduction
