Beyond the Saga of Rocket Science Walter Sierra, 2016-12-19 *Beyond the Saga of Rocket Science* is a series of four closely related books that provide an amply illustrated overarching perspective to a broad nontechnical audience of the entire panorama surrounding the development of rockets, missiles and space vehicles as we know them today and what the exciting future holds. The books are sequential and form an integrated whole. *The Dawn of the Space Age*, *Avoiding Armageddon*, *In Space To Stay*, *The Never Ending Frontier*. *The Dawn of the Space Age* begins with exciting tales of the earliest developers of rudimentary rockets and the deadly battles they fought in China between 228 and 1600 A.D. A historical fiction approach brings long ago characters and events to life. Palace intrigues, treachery and warmongering are interwoven with vivid depictions of courage and bravery to showcase the gradual progression of the science of rocketry from fireworks displays to effective weapons in the battlefield. Readers in the West will learn something about the Eastern mindset where over half the world's population lives today. The tremendous achievements of the Wright Brothers, Wilbur and Orville, in the early 1900s serve as a useful backdrop for showcasing the difficulties in developing completely new technologies for practical use. The Wright Brothers had to go abroad to France before World War I to garner enough support and funding to mature airplane science to the point that the U.S. Army took notice. Building on the Wrights' successes, Ludwig Prandtl in Germany and Theodore von Kármán in the United States made pioneering developments in aerodynamics which are crucial to rocket flight. The invention of the airplane inspired early innovators in the 1920s-1930s to lay the foundation for the giant aerospace conglomerates of today, including William Boeing, Boeing Company, Allan Loughead and Glenn Martin, Lockheed Martin, Jack Northrop and Leroy Grumman, Northrop Grumman, James McDonnell and Donald Douglas, McDonnell Douglas. These stalwarts were very foresighted and willing to take calculated risks. The ingenious Dr. Robert Goddard, inventor of the modern rocket, developed a sound theory and conducted pioneering flight tests in the 1920s-1930s while overcoming many failures. However, Goddard's rockets were not taken seriously enough in the United States to enable the development of practical missiles and launch vehicles. But Germany sure took notice. World War II gave the biggest impetus ever to advancing rocket science and related technologies. The Nazi war machine funded Dr. Wernher von Braun and his cohorts to develop rocket-driven weapons such as the V1 and V2, which killed thousands during World War II. Fortunately for America, von Braun and key members of his team decided to seek asylum in the United States when the war ended. Now the country took up the engineering of rockets in earnest. Von Braun went on to lead the American space program during the crucial decades of the 1950s-1960s. He did more to advance missiles, rockets, spaceflight and enable manned landings on the moon than anybody else in America. Six astronauts flew solo on six Project Mercury flights, 1961-1963. Three of them joined another 13 astronauts to orbit Earth on 10 two-person Project Gemini flights, 1965-1966. Without a single failure, the Soviet Union captured their fair share of German rocketeers, including the influential Helmut Grttrup. They learned everything possible from the German expatriates. Then they

cast the Germans aside and undertook rocket and missile development using indigenous experts like Sergei Korolyov and Valentin Glushko. Like von Braun, Korolyov was ingenious in his own right and led the development of Soviet rocket science until his untimely death in January 1966. Engineers and scientists are today's unsung heroes. They work in the shadows without any public acclaim or recognition yet the technologies they develop touch every facet of our daily lives. *This New Ocean* William E. Burrows, 2010-09-29. It was all part of man's greatest adventure: landing men on the Moon and sending a rover to Mars; finally seeing the edge of the universe and the birth of stars and launching planetary explorers across the solar system to Neptune and beyond. The ancient dream of breaking gravity's hold and taking to space became a reality only because of the intense cold war rivalry between the superpowers with towering geniuses like Wernher von Braun and Sergei Korolyov shelving dreams of space travel and instead developing rockets for ballistic missiles and space spectacles. Now that Russian archives are open and thousands of formerly top secret U.S. documents are declassified, an often startling new picture of the space age emerges: the frantic effort by the Soviet Union to beat the United States to the Moon was doomed from the beginning by gross inefficiency and by infighting so treacherous that Winston Churchill likened it to dogs fighting under a carpet. There was more than science behind the United States' suggestion that satellites be launched during the International Geophysical Year and in one crucial respect: Sputnik was a godsend to Washington; the hundred odd German V-2s that provided the vital start to the U.S. missile and space programs legally belonged to the Soviet Union and were spirited to the United States in a daring operation worthy of a spy thriller. Despite NASA's claim that it was a civilian agency, it had an intimate relationship with the military at the outset and still does. A distinction the Soviet Union never pretended to make: constant efforts to portray astronauts and cosmonauts as Boy Scouts were often contradicted by reality. The Apollo missions to the Moon may have been an unexcelled political triumph and feat of exploration but they also created a headache for the space agency that lingers to this day. *This New Ocean* is based on 175 interviews with Russian and American scientists and engineers, on archival documents including formerly top secret National Intelligence Estimates and spy satellite pictures and on nearly three decades of reporting. The impressive result is this fascinating story: the first comprehensive account of the space age. Here are the strategists and war planners, engineers and scientists, politicians and industrialists, astronauts and cosmonauts, science fiction writers and journalists and plain ordinary unabashed dreamers who wanted to transcend gravity's shackles for the ultimate ride. The story is written from the perspective of a witness who was present at the beginning and who has seen the conclusion of the first space age and the start of the second.
