Fire And Memory On Architecture And Energy:

Fire and Memory Luis Fernández-Galiano, 2000 The author reconstructs the movement from cold to warm architecture reintroduces energy to the discussion and reminds the reader the sense of touch is necessary to an understanding of the environment Illustrations

Architecture and Energy William W. Braham, Daniel Willis, 2013-07-18 Does energy consumption influence architectural style Should more energy efficient buildings look different Can that look be used to explain or enhance their performance Architecture and Energy provides architects and architectural theorists with more durable arguments for environmental design decisions arguments addressing three different scales or aspects of contemporary construction By drawing together essays from the leading experts in the field this book engages with crucial issues in sustainable design such as The larger role of energy in forming the cultural and economic systems in which architecture is conceived constructed and evaluated The different measures and meanings of energy performance and how those measures are realized in buildings The specific ways in which energy use translates into the visible aspects of architectural style Drawing on research from the UK US Europe and Asia the book outlines the problems surrounding energy and architecture and provides the reader with a considered overview of this important topic

Net Zero Energy Design Thomas Hootman, 2012-09-25 Conveniently organized and packed with robust technical content and clear explanations of key principles Written by an architect who is the director of sustainability at a global architecture firm Net Zero Energy Design is a practical guide for architects and related construction professionals who want to design and build net zero energy commercial architecture It offers no nonsense strategies step by step technical analysis and valuable examples in addition to developed case studies With a focus on application in a variety of building types and scales the book also develops a broad based understanding of all the integrated principles involved in achieving net zero energy This book is an indispensable resource for anyone venturing into net zero energy design construction and operation and it also serves as an excellent resource on a variety of sustainable design topics Important features include Organization based upon the commercial building delivery process Robust technical content for use in actual project applications Analysis examples that demonstrate key technical principles Plenty of design data for use as a valuable design resource Abundant and sophisticated information graphics and color illustrations and photographs A distinct design focus on the content that inspires adoption of principles into projects

Convergence: An Architectural Agenda for Energy Kiel Moe, 2013-07-31 Convergence is based on the thermodynamic premise that architecture should maximize its ecological and architectural power No matter how paradoxical it might initially seem architects should maximize energy intake maximize energy use and maximize energy feedback and reinforcement This presumes that the necessary excess of architecture is in fact an architect's greatest asset when it comes to an agenda for energy not a liability But how do we start to understand the full range of eco thermodynamic principles which need to be engaged with in order to achieve this Kiel Moe explicates three factors materials energy systems and

amortization When these three factors converge through design the resulting buildings begin to perform in complex if not subtle ways By drawing on a range of architectural thermodynamic and ecological sources as well as illustrated and well designed case studies the author shows what architecture stands to gain by simultaneously maximizing the architectural and ecological power of buildings

Architecture and Fire Stamatis Zografos, 2019-06-12 Architecture and Fire develops a conceptual reassessment of architectural conservation through the study of the intimate relationship between architecture and fire Stamatis Zografos expands on the general agreement among many theorists that the primitive hut was erected around fire locating fire as the first memory of architecture at the very beginning of architectural evolution Following the introduction Zografos analyses the archive and the renewed interest in the study of archives through the psychoanalysis of Jacques Derrida He moves on to explore the ambivalent nature of fire employing the conflicting philosophies of Gaston Bachelard and Henri Bergson to do so before discussing architectural conservation and the relationship between listed buildings the function of archives and the preservation of memories from the past The following chapter investigates how architecture evolves by absorbing and accommodating fire while the penultimate chapter examines the critical moment of architectural evolution the destruction of buildings by fire with a focus on the tragic disaster at London's Grenfell Tower in 2017 Zografos concludes with thoughts on Freud's drive theory He argues the practice of architectural conservation is an expression of the life drive and a simultaneous repression of the death drive which suggests controlled destruction should be an integral part of the conservation agenda Architecture and Fire is founded in new interdisciplinary research navigating across the boundaries of architecture conservation archival theory classical mythology evolutionary theory thermodynamics philosophy and psychoanalysis It will be of interest to readers working in and around these disciplines

Background Noise, Second Edition Brandon LaBelle, 2015-01-29 Background Noise follows the development of sound as an artistic medium and illustrates how sound is put to use within modes of composition installation and performance While chronological in its structure Brandon LaBelle's book is informed by spatial thinking weaving architecture environments and the specifics of location into the work of sound with the aim of formulating an expansive history and understanding of sound art At its center the book presupposes an intrinsic relation between sound and its location galvanizing acoustics sound phenomena and the environmental with the tensions inherent in what LaBelle identifies as sound's relational dynamic For the author this is embedded within sound's tendency to become public expressed in its ability to travel distances foster cultural expression and define spaces while being radically flexible This second expanded edition includes a new chapter on the non human and subnatural tendencies in sound art revisions to the text as well as a new preface by the author Intersecting material analysis with theoretical frameworks spanning art and architectural theory performance studies and media theory Background Noise makes the case that sound and sound art are central to understandings of contemporary culture

Science Review ,2002 Thermodynamic Interactions Javier Garcia-German,2017-07-01 An Exploration into Material Physiological and Territorial Atmospheres Energy and sustainability is a complex topic that needs to address simultaneously core disciplinary values and ideas that come from other fields of knowledge The interconnection between the environment and its climate its built structures and the human body requires overlying architecture with other disciplines such as meteorology thermodynamics or physiology to engage them in a holistic way The book is structured in three blocks Territorial Atmospheres Material Atmospheres and Physiological Atmospheres which present three distinct and successive realms at which thermodynamic exchanges are taking place Territorial Atmospheres deals with the thermodynamic interaction between the environment and its built structures Material Atmospheres focuses on the interaction between a building and the climate it generates And lastly Physiological Atmospheres centers on the interaction between indoor ambient and the physiologi cal and psychological effects on human beings Each of the blocks has a coeditor Silvia Benedito for Territorial Atmospheres I aki balos for Material Atmospheres and Philippe Rahm for Physiological Atmospheres who will work together with the editor defining the context of the book **Design Book Review** ,2001 **Emerging Research + Design** Kate Wingert-Playdon,Herman Neuckermans,2007 **Metropolis** ,2003 **Energy Research Abstracts** ,1995
